

CASE STUDY

ABOUT HOMEWOOD SCHOOL

Homewood School provides a secure and caring learning environment in which all students can flourish and succeed. Homewood has a strong track record of academic success with the outcomes for all students and all groups are on an upward trend.

PROBLEM

Homewood were struggling with smelly toilets and also found that their toilet rolls were collapsing and had to be thrown away with tissue left, wasting products.

SOLUTION

The dedicated account manager for Homewood School suggested combatting the toilet smells with P-Blocks which are specially formulated for use in toilets and washrooms to help neutralise washroom odours and Good Sense Breakdown, a biological based odour neutraliser.

These products combined managed to improve the scent and general environment in the toilets.

The Account Manager also switched Homewood's toilet rolls to the Smart One Mini System which delivers one sheet at a time dispensing which reduces consumption, decreases waste and the tissue is EU Eco Label accredited.

RESULTS

Due to Homewood's Client Manager's expertise on washroom hygiene, better quality products were recommended quickly, making the washrooms easier to manage for Homewood School.

By switching to these products, Homewood School are more environmentally friendly as the toilet tissue they now use is eco accredited and less is used and therefore wasted, so they are now producing less waste. They have also **saved around 20%** through wastage and staff labour costs.

Our Account Manager was so helpful in advising us which products would be beneficial to our school! We now have to buy less products as we are wasting less!
